

THE PERFECT GENERAL

Technical Supplement for the Amiga Computer

GENERAL

This card contains start-up and other machine specific instructions for the Amiga computers. The game disk has an ASCII file named 'ReadMe'. This contains the latest notes on the game. You can read the file by typing the command "type ReadMe" from CLI or selecting the ReadMe icon from Workbench.

PACKAGE CONTENTS

The Perfect General should contain a manual, this technical supplement, one 3 1/2" disk, a registration card and 6 full color maps (two sided).

REQUIRED EQUIPMENT

COMPUTER: The game requires an Amiga 500, 1000, 2000, 2500 or 3000. The machine should have at least 1024K of RAM.

CONTROLS: The game can be run entirely from the keyboard, with a joystick or a mouse. When two players are playing, each may use a separate control (i.e. the mouse and the joystick).

DOS: The game must have Amiga DOS version 1.2 or higher. The game is compatible with Amiga 2.0

INSTALLATION

The Perfect General is not copy protected. It is playable from floppies or from the hard disk (which we recommend). However, the original disk carries the game in a compressed format. As a result, one cannot play the game directly from the distribution disk. You must install the game before play. You can install the game to either 2 blank formatted floppy disks or a hard disk.

To install the game, insert the distribution disk into any of your floppy drives. From CLI, execute the program 'PG install'. From workbench, select the 'PG install' icon. Then follow the prompts. The game will install itself on either on your floppy disk or on the hard disk (in the drive/directory of your choosing).

RUNNING THE PERFECT GENERAL

NOTE: The Perfect General requires a stack size of 32000. If you are starting the program through workbench, you do not need to worry about the stack size as the icon will take care of it. However, if you are starting the program through CLI you will have had to already set the stack to at least 32000. This may be done by executing the command 'stack 32000'.

FROM FLOPPIES: Insert Game Play Disk #1 in your computers disk drive. If running from workbench, just open the disk and select the Perfect General icon. To run from CLI, change to that drive (for example, by typing "cd df0:", and then execute the command "Perfect_General". The game will then start up. The game will prompt you when you need to change floppies.

FROM THE HARD DRIVE: From workbench, just select the Perfect General icon. From CLI, change to the directory in which you installed The Perfect General. Then type the command "Perfect_General". The game will then start up.

CONFIGURING FOR YOUR MACHINE

When you install the game, you will be asked several questions about your machine and how to configure it. This information is saved off for later use. To change the hardware configuration, select the 'Change Hardware Configuration' from the primary menu.

QUESTIONS

If you have any problems installing or running our game, please call our help line at 908-788-2799 from 10:00 A.M. to 5:00 P.M. > EST Monday through Friday and we will try to help.

Comments are also quite welcome. We can be reached in writing at:
